

web catalog

nèoCatalog

Image catalog, colorways and ambient simulation in your web!

nèoCatalog is the state-of-the-art web solution that unifies and organizes all your design. The powerful SQL engine searches for all information using third-party applications.

Colorways

Create colorways with your desired color library just by using a web browser, without any other software. This is nèoCatalog.

Ambien simulation

Simulate your design collection on many objects in best quality just with one single click!

Buy

nèoCatalog can also generate on-the-fly order forms directly from your customers to be printed.

Security

Several user-levels with multiple privileges can be organized. Setting exclusivity of designs and colorways is supported and can be activated any time

Customize

nèoCatalog can be connected to your company's database and is customizable for individual web integration. Many languages are supported: English, Spanish, Italian, Portuguese and Catalan.

nèotextil

complete solution for color separation, colorway creation and textile printing

repeat

repeat

nèoRapportPro

File repeatability

nèoRapportPro offers all requirements to create a repeat of a design. Use a fix offset (1/1, 1/2, 1/4, etc.) or an individual drop in vertical or horizontal direction. Generate the repeatability of designs with any image size.

It comes with a special preview window that immediately follows your adjustments on repeat creation in real-time.

nèoRapportPro is directly connected to Adobe Photoshop allowing to repeat using the move tool.

colorway

nèoColorations

Create unlimited colorways

nèoColorations allows to create single and multiple colorways using standardized and individual color libraries as well as monitor-based colouring through calibrated ICC profiles.

Create your separations in Photoshop with nèoMulticomiaPro or import multiple color channels from any third-party CAD system, combine them and work with multichannel grayscale in a single file.

With nèoColorations you can create any desired colorway (in RGB, CMYK or LAB color space) and save the calculated variations with any file format supported by Photoshop.

Print layouts

Create your own customized layouts, set the size of the colorways to be exported and attach the color chips with additional color information or other important notes.

Digital print

Print on paper or textile with best color accuracy using human CMS in nèoStampa. This powerful combination allows you to save costs caused by the expensive and time-consuming sampling process in your factory.

In addition to this nèoColorations can also print directly to any desktop or small-format printer using the standard printer driver. Combine with the EyeOne spectrophotometer to create new color libraries with accurate color matching.

separation

nèoMulticomiaPro

Industrial color separations

nèoMulticomiaPro is the professional tool to create color separations from any scan or image in RGB.

With up to 256 gray levels for each separation nèoMulticomiaPro now generates smooth and high-quality color separations.

Automated separations

The new method for automatic color selection supports special settings for spot colors and halftones.

Never before it has been easier and faster to create color separations of an image.

Manual separations

The new tools assist in the color separation process. Simply select a color decide to add or subtract with another.

Drag and drop the separations in order to join or exclude them.

The new keyboard shortcuts will speed up your color separation process.

More methods

Create easily dark and light colors, combine your color separations with addition or subtraction and preview the combinations in real-time.

High quality

With up to 256 gray levels per color separation and full control of the gray level curve for each separation you'll get out the maximum quality.

applied texture simulation

nèoVirtualVision

Ambien simulation in 3D

nèoVirtualVision is the virtual simulation engine for Adobe Photoshop, showing designs, pattern, images or colors on any object in 3D.

By preserving the shadow effects from the original picture the result is a realistic simulation of the original ambience with the desired texture.

Expand your possibilities by demonstrating your designs before they are even printed!

More ambience

Now offering more ambient collections, you are ready to go.

Send us one picture of an ambience and our team will be pleased to rebuild the panels for you.

Simulations

nèoVirtualVision is designed for simulations on fashion, home textiles, graphic arts, advertisement, automotive and many other markets.

Build and present your catalog to your customers using the latest collection without the requirement of physically producing your designs.

Quality

The simulations are generated using the high-quality engine by preserving the shadow effects of the original ambience.

All textures can be scaled and rotated but always showing the original scale and flair of the object.
